"Fight Spanish Influenza With Daily Disinfection" (advertisement). The New York Times. 30 October 1918, p. (Accessed via ProQuest, New York Times (1857–Current file), Document ID 97039401)

Research Facts: Beginning in the early 20th century, women would often use Lysol, a household disinfectant, as a douche. Lysol advertised this purpose, claiming that it would guard against odors (believed to be a euphemism for birth control). Before 1911, there were a reported 193 poisonings and five deaths from Lysol douching, and women often complained of burning and blisters. In 1952, Lysol's formula was changed from cresol to become a quarter as toxic as before. The Lysol used in homes today is not the same as the one historically used for douching, and is no longer owned by the same company. Advertisements for Lysol as a feminine hygiene product often targeted women's insecurities about their bodies and caused them to feel badly about them and feel the need to use a douche to remain clean and fresh. Lines used in different 20th century Lysol advertisements include: "Often a wife fails to realize that doubts due to one intimate neglect shut her out from happy married love", "Day after heartbreaking day I was held in [...] a web spun by my husband's indifference. [...] Was the fault mine?", "No woman who has a normal foundation of good health can be forgiven for failing to "stay young with her husband."" Lysol was advertised in 1918 as a way to fight the Spanish Flu Pandemic; it was recommended that everything in contact with flu patients, including their rooms, be cleaned with Lysol to prevent the spread of the disease. Lysol contains phenol, another term for carbolic acid, an early disinfectant employed by Joseph Lister.
